Workflow management system

A Workflow is a series of decisions made by different people that determines what happens to a particular request that one of those people made, according to a defined and repeatable process.WfMS allows the user to define different workflows for different types of jobs or processes

For example,
 in a manufacturing setting, a design document might be automatically routed from designer to technical director to the production engineer

How to use the project
 There are 6 pages:

Login page:
Here use must provide login credentials to login user name and password

Home page:

1.horizontal nav bar:

1)dark/light mode:
Web application can be viewed in dark and light mode by clicking on left most icon on horizontal navbar(note:when you hover over the icon it tells what will happen clicking on that icon

2.Notifications icon(inbox):
Here stakeholder will get all the messages sent from other stakeholders in the company

By default inbox will appear when stakeholder logs in
